### **Performance Access Now Owns Australia's Highest-Reaching Tracked Boom Lift**

*The Genie® S®-80 J TraX™ is the first and only tracked boom available in its height class*

Sydney (August 8, 2024) – Performance Access, which provides top-tier equipment rentals in Sydney and the surrounding areas, has taken delivery of the first Genie® S®-80 J TraX boom lift in Australia.

The S-80 J TraX is the first and only tracked boom in its height class, giving it extra flexibility for different jobsites. Performance Access chose to add the S-80 J TraX boom to its fleet because of the machine's versatility for a variety of industries and applications, the machine's total cost of ownership and Genie's reputation for quality.

"The S-80 J TraX will integrate seamlessly into our fleet, enabling our clients to access and work in areas that were previously unreachable due to inadequate hardstand conditions," said Performance Access General Manager Rocco Perugini. "Its maximum working height and platform capability also were significant factors in our decision."

The S-80 J TraX delivers a maximum working height of 26.51 m and a max platform capacity of 300 kg. It also reduces contact pressure by an average of 72% over standard tyre options. This is due to the tracks' broader weight distribution that allows it to operate on sensitive surfaces like low-weight floors, sand and turf, or in muddy terrain without placing mats or cribbing to support the machines' weight.

Four independent tracks swivel vertically up to 20°, creating a smooth ride on rough ground conditions — another important feature for Performance Access.

"The boom's tracked undercarriage provides excellent stability on uneven terrain," Perugini said. "Built to withstand harsh working conditions, it ensures long service life and reliability, even in demanding environments. Additionally, the ergonomic design of the controls and platform provides comfort for the operator during extended use."

Perugini noted that Performance Access expects its customers will use the lift for different tasks ranging from construction, roofing and maintenance to telecommunications, tree lopping and signage. Those uses are likely to vary depending on the region, and whether the work is being done in cities or rural areas. For example, in urban spaces, the S-80 J TraX might be useful for building maintenance or general construction, while other customers might use it for tree care or utility maintenance in forested terrain.

Finally, cost was a consideration in Performance Access's decision to purchase the S-80 J TraX. Genie's commitment to quality, the boom's design, and TraX design combine to deliver a low total cost of ownership.

The S-80 J TraX is based on the design of the Genie S-80 J boom lift, which offers a simplified design that reduces wearable and replaceable parts. The TraX system also contains 50% fewer serviceable parts compared with other tracks systems on the market, which further reduces the time and expense related to maintenance. Additionally, for equipment owners with multiple TraX machines in their fleet, aside from the rubber track and the frame, all parts are common between the small and large TraX systems, reducing parts inventory requirements for rental companies.

"At Performance Access, safety and quality are paramount. Our well-maintained fleet of equipment is sourced from trusted manufacturers, guaranteeing optimal performance and reliability," Perugini said. "We chose a Genie boom because Genie is known for producing high-quality aerial work platforms and is a trusted name in the industry."
