Highlights:

- The popular Genie® Lift Tools™ Access Deck, which previously was available only in North America, is now available globally.
- The Access Deck improves access and productivity when performing tasks in hard-to-reach areas like rafters, ducts, and ceiling panels by adding 50.8 cm / 20 in of working height.

Genie Expands Access Deck Availability Globally

The popular accessory, which increases productivity and improves work practices, is available in all regions for several models of Genie GS™ Slab Scissor Lifts

Bothell, WA (September 10, 2025) – Building on the popularity of its Lift Tools™ Access Deck accessory, Genie is expanding Access Deck availability to include all regions globally. Previously, the Access Deck was available only in ANSI markets.

“Expanding Access Deck availability globally is a direct result of how well the accessory has been received by our North American customers,” said Bryan Williams, Genie Senior Product Manager. “With availability extending globally, the Access Deck brings even more functionality to jobsites worldwide.”

The Access Deck improves access and productivity when performing tasks in hard-to-reach areas like rafters, ducts, and ceiling panels by adding 20 in / 50.8 cm of working height. Designed for quick, toolless installation in under five minutes, the Access Deck is also easily removable, allowing it to be transferred between machines as needed. This increases flexibility and boosts utilization rates for equipment owners and offers rental companies a valuable add-on option.

For regions outside of North America, the Access Deck will be available on three next-generation slab scissor lift models: GS™-1932, GS-2632, and GS-3232. In North America, the Access Deck continues to be available on the GS-1432m, GS-1932m, GS-1930 and GS-1932 E-Drive scissor lifts.
